SUMMARY

Fullstack Engineer with 5+ years of experience building and maintaining production systems for automotive manufacturing and FMCG companies, covering ERP, HRIS, and enterprise system integrations. Specialized in integrating RFID gates, handheld scanners, and NFC readers with Laravel and Flutter applications, enabling seamless data synchronization with Oracle JD Edwards and automated inventory transactions without manual entry. Experienced with React.js, Vue.js, and Node.js for modern web application development. Comfortable owning the full development lifecycle, from gathering requirements directly from business users and developing solutions to deployment, monitoring, backup, and ongoing maintenance. Experienced in Git-based development workflows, code reviews, and ticket-driven delivery.

EDUCATION

- **STMIK Dharma Negara Bandung**
Bachelor's Degree (S1), Informatics Engineering | GPA: 3.32 / 4.00
2020 – 2022
- **Telecom PDC Karawang**
Diploma (D2), Professional Application Development | GPA: 3.16 / 4.00
2018 – 2020

SKILLS

- **Backend:** PHP, Laravel, CodeIgniter, Python, Node.js, Express.js, REST API Design
- **Frontend:** React, TypeScript, Inertia.js, Vue.js, AngularJS, JavaScript, jQuery, Blade, Tailwind CSS, Bootstrap
- **Mobile:** Flutter (Android Handheld & Enterprise Devices)
- **Databases:** PostgreSQL, MySQL, Oracle, Oracle JD Edwards, SQL Server
- **Integration & IoT:** WebSocket, RFID, NFC, ERP Integration, Power BI, Third-Party API Integration
- **Tools:** Microservices Architecture, Git, GitHub, Azure Repos, Docker, CI/CD, Jira, Trello, Code Review, UAT, Technical Documentation

WORK EXPERIENCE

Fullstack Engineer · PT Chemco Harapan Nusantara
Automotive Components Manufacturer | Multi-Plant Operations
Apr 2026 – Present

Tech Stack: React.js · TypeScript · Laravel · Flutter · Python · Node.js · Inertia.js · WebSocket · Oracle JD Edwards · Power BI · RFID · NFC

- Designed and delivered an end-to-end RFID warehouse automation platform consisting of a Flutter handheld application, Laravel backend and admin console, and Python middleware for RFID gate hardware. Integrated the platform with Oracle JD Edwards to automatically generate Inventory Transfer and Inventory Receipt records when materials pass through the gate, eliminating manual data entry across the warehouse-to-assembly process.
- Built a real-time control room dashboard using Laravel, Inertia.js, React, TypeScript, and WebSocket, providing a single source of truth across departments and delivering live process updates without page refreshes, replacing manual per-shift reporting.
- Developed a production downtime tracking system with Flutter and Laravel, streaming robot downtime data into Power BI to replace spreadsheet-based logging and enable trend analysis for maintenance teams to prioritize repairs.
- Developed an NFC-based skill matrix application using Flutter and Laravel, allowing employees' competency profiles and training histories to be retrieved instantly by scanning their ID cards, eliminating manual spreadsheet lookups for HR and production teams.
- Built an incoming QA inspection application with OK/NG status tracking and daily dashboards, replacing paper-based inspections and providing QC teams with a supplier-level audit trail.

- Managed the operational lifecycle of deployed applications, including server specification, scheduled database backups, application monitoring, troubleshooting, and bug fixing, maintaining internal targets of ≥99% application availability, <30-minute ticket response time, and zero critical defects.

Fullstack Developer · PT Indonesia Thai Summit Auto

Automotive Stamping & Parts Manufacturer

Apr 2025 – Apr 2026

Tech Stack: Node.js · Express.js · Laravel · Vue.js · Python · React.js · MySQL · SQL Server · REST API

- Architected and developed ITSA Portal, a centralized internal platform integrating Document Action Request and Asset Management into a single system, replacing workflows previously managed through paper forms and spreadsheets.
- Developed an unlicensed software detection system using a Python scanning agent deployed across company workstations and integrated with a Laravel dashboard, automating license-compliance audits previously conducted manually on a quarterly basis.
- Developed a dies monitoring system to track the condition and performance of production dies, providing the maintenance team with data to schedule preventive servicing before failures affect production lines.
- Delivered a medical-room visit tracking application using Laravel and Vue.js to record and monitor employee visits to the company clinic.
- Provided application support, hardware and software troubleshooting, and end-user training for released systems, ensuring effective user adoption and smooth day-to-day operations.

Fullstack Developer · PT Pinus Merah Abadi (Nabati Group)

Major Indonesian FMCG Manufacturer | HR Platform Serving Multiple Business Units

Feb 2024 – Apr 2025

Tech Stack: PHP · Git · AngularJS · JavaScript · MySQL · REST API

- Developed 11 HRIS modules for the Nabati Group HC Portal using the company's proprietary PHP MVC framework and AngularJS frontend, supporting HR digitalization across multiple business units.
- Built employee self-service features including attendance, leave requests, and payroll information, reducing dependency on HR administrators for routine employee requests.
- Conducted requirements-gathering sessions directly with HR stakeholders and translated business requirements into technical specifications, ensuring solutions aligned with actual business processes.
- Designed and optimized MySQL database schemas and REST APIs supporting integration between portal modules.
- Performed unit, integration, and end-to-end testing before releases and handled post-release maintenance and enhancements based on user feedback.

Fullstack Developer · PT 360 Teknologi Indonesia

Software Consultancy | ERP Migration Project for Indomaret

Dec 2022 – May 2023

Tech Stack: Laravel · Oracle · React.js · PostgreSQL · Git · GitHub

- Supported a full ERP database migration from Oracle to PostgreSQL, refactoring Laravel models, controllers, and views to ensure compatibility with the new database schema.
- Converted Oracle-specific stored procedures and queries to Laravel Query Builder and PostgreSQL, improving cross-database portability and reducing vendor lock-in.
- Validated and re-tested migrated queries to ensure outputs remained consistent with the legacy system prior to cutover.
- Collaborated within a Git/GitHub development workflow, including branching, code reviews, and merge requests, contributing to an on-schedule migration with zero production downtime.

IT Programmer · PT Trimitra Chitrahasta

Automotive Components Manufacturer | In-House ERP Development

Oct 2020 – Oct 2022

Tech Stack: Laravel · jQuery · AJAX · MySQL · Oracle · PostgreSQL · Azure Repos · Jira

- Developed 18 warehouse modules within the company ERP using Laravel, jQuery, AJAX, and MySQL, covering inventory management, goods movement, and warehouse reporting.
- Contributed to the migration of a legacy FoxPro/VB.NET desktop ERP to a modern web-based platform, eliminating per-machine installation dependencies and enabling system access across devices.
- Led UAT sessions and system demonstrations with end users before go-live, translating shop-floor feedback into actionable system improvements.
- Developed a structured employee suggestion system for submitting, tracking, and following up on improvement proposals, replacing an untracked physical suggestion box.
- Built an internal e-learning platform for HR training, enabling employees to complete self-paced learning without waiting for scheduled in-person sessions.

IT Programmer — Internship · PT Inti Ganda Perdana

Jul 2019 – Jan 2020

- Supported internal web application development for Portal IGP, including relational database design, REST API integration, and unit, integration, and end-to-end testing.
